

$174/140 = 1.24$  for cap size

But preamp ring needs to be at least

$4/3 = 1.33$  times as big to carry all the preamps

However, to keep leads short, preamp ring should be  $100/67 = 1.5$  times as big

The LN tank needs to be  $14/12 = 1.17$  times as big to handle the additional heat load for the same length of time.
